Care and Maintenance

With the right care and maintenance – your custom suppressor will last a life time – *providing* you treat it as you would your expensive rifle-scope.

Check suppressor is hand-tight on your barrel before each shooting trip.

Your Sealed-Unit suppressor is self cleaning, you will never have to try to disassemble it. As it collects a fine lining of residue – it will actually begin to work better and quieter.

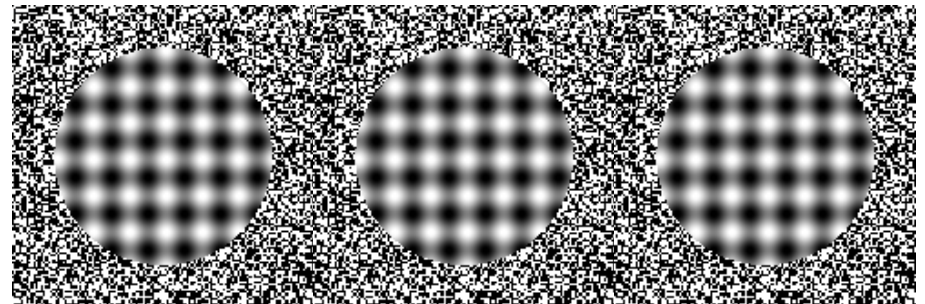

Never use solvents or aerosol sprays on your custom suppressor.

Use the same fine oil that you wipe down the rest of your rifle.
